# Dental Implants

## Example of Fees

<u>Treatment</u>	<u>Fee (depending on complexity)</u>
Initial Consultation	Free if referred by a dentist. £130 if self referred
Assessment and CBCT scan with report	£150 for one jaw £225 for both jaws
If needed- Extraction/ removal of single tooth	£260
Implant Placement (one implant)	£2000
Restoration of one zirconia crown	£700
If needed- Bone graft (one area)	£500

Single Implant from £2850 in 2025

## ***Am I suitable for dental implants?***

*Most adults are, but we'll assess your general health, medications, and gum condition first.*

## ***Is the procedure painful?***

*Implant placement is done under local anaesthetic and is well tolerated. Discomfort afterwards is generally mild and manageable.*

## ***How long does the process take?***

*From planning to fitting your final tooth, it typically takes 4–10 months, depending on healing and whether bone grafting is needed. In complex cases this could take longer.*

## ***Will I be left with a gap?***

*We can provide a temporary false tooth while your implant heals. We recommend this for any front teeth so you can continue to smile whilst waiting for the implant crown.*

## ***How long do implants last?***

*Studies show a high success rate of around 95–98% over 10 years. With good home care and regular hygiene visits, implants can last well beyond 10 years.*

## ***Will there be any ongoing costs?***

*Yes, you'll need to attend regular check-ups and hygiene visits at least every 6 months. We also recommend an annual implant review to monitor long-term success which is chargeable.*

## ***Do I need to look after the implant once it's healed?***

*Yes, daily cleaning around the implant is essential, just like natural teeth. We'll advise on the best tools and techniques such as specific brushes and implant floss to help keep the implant healthy.*

## ***What if I smoke?***

*Smoking increases implant failure risk, so we do not recommend having implants unless you are committed to quitting.*

## ***Who will do the implant treatment?***

*Implant treatment at Market Place Dentistry is carried out by:*

- Dr Tarjinder Gill (Tarj) – With over 10 years of experience, Tarj places implants regularly and is skilled in both straightforward and complex cases.*

*OR*

- Dr Thomas Calvert (Tom) – Tom began placing implants in 2025 and is continuing to expand his experience and training in implant dentistry.*
